Summary

Backend Software Engineer with hands-on experience building production-grade REST APIs, full-stack applications, and cloud-integrated systems using Java, Spring Boot, React, and AWS. Delivered end-to-end features including Twilio voice/SMS integration, JWT authentication, and ML-powered dashboards. Strong foundation in DSA, system design, and Agile workflows.

Technical Skills

Languages	Java, JavaScript, TypeScript, SQL, Python
Backend	Spring Boot, Node.js, REST APIs, Microservices, JWT, Spring Data JPA, Hibernate
Frontend	React 19, Vite, Axios, React Router DOM
Databases	MySQL, MongoDB
Cloud / DevOps	AWS (EC2, Lambda, CloudWatch), Linux, Docker, Jenkins, CI/CD, Maven
Tools	Git, GitHub, IntelliJ IDEA, VS Code, Postman, ngrok
Core CS	DSA, OOP, DBMS, OS, Computer Networks, System Design

Experience

Java Full Stack Developer Intern

EchoBrains Technologies, Bangalore

Jan 2026 – Apr 2026

4-member Agile team

- Engineered 12+ production REST API endpoints using Java 17 and Spring Boot, improving backend response handling and reducing redundant payload transfer through targeted query and payload optimisation.
- Implemented JWT-based stateless authentication across 10+ secured routes, eliminating session-storage dependency and improving API security during the internship project lifecycle.
- Diagnosed and resolved 20+ API and integration issues using structured logging and request tracing, improving debugging efficiency across multiple development sprints.
- Contributed as a core member of a **4-engineer Agile team**, delivering 8+ backend and frontend features across 6 development sprints with successful sprint reviews and timely task completion.

AI & ML Intern

Edunet Foundation / IBM SkillsBuild

Jun 2025 – Jul 2025

- Trained regression and classification models with scikit-learn on a 10,000+ row dataset, improving prediction accuracy by **15%** over the baseline model.
- Designed and deployed Flask REST APIs for real-time inference, enabling predictions through an interactive Streamlit dashboard used by 5+ evaluators and mentors.
- Refactored preprocessing pipelines including feature scaling, encoding, and null handling, reducing model training time by **20%** and decreasing pipeline execution time from 5 minutes to under 4 minutes.

Projects

VoiceCart — Full-Stack BPO Call Centre Simulation

github.com/rohitBadiger/voicecart

Java 17, Spring Boot, React 19, MySQL 8.0, Twilio SDK, Maven, Vite

- Architected a monolithic Spring Boot backend comprising **18 Java classes** — 6 Controllers, 6 Services, and 6 Repositories — following strict 3-layer separation (Controller → Service → Repository), supporting the full call-centre order lifecycle from inbound call to SMS confirmation.
- Integrated Twilio Voice webhooks and SMS SDK for real-time call routing and automated order confirmation messaging, including fallback simulation support for local development.
- Designed a normalised MySQL schema with **6 relational entities** (**users, products, calls, orders, order_items, agent_sessions**), enforcing referential integrity via foreign-key constraints across all order and call flows.
- Developed the React 19 frontend with **6 modular JSX components**, centralised Axios API handling, polling-based live call-status updates, break-management logic, and agent performance tracking.

DevLaunch — Simplifying Deployment

github.com/RohitBadiger/devlaunch

Node.js, AWS Lambda, MongoDB, JWT

- Built serverless deployment-trigger workflows on AWS Lambda and MongoDB, reducing manual deployment steps from 8 to 3 and improving overall deployment efficiency.
- Secured 8+ API routes with JWT authentication and role-based access control (RBAC), ensuring only authorised agents could trigger or monitor deployments.
- Implemented asynchronous deployment event queuing with CloudWatch monitoring hooks, enabling near real-time deployment visibility with sub-500 ms alert response latency.

GrokMailClient — Java Email Client

github.com/RohitBadiger/grokmail

Java, IMAP, SMTP, Socket Programming

- Built a custom IMAP/SMTP email client from scratch using raw socket communication and protocol parsing, supporting real-time inbox synchronisation across 5+ test email accounts with average sync latency under 300 ms.
- Engineered robust exception handling and recovery mechanisms for network interruptions and malformed server responses, achieving stable execution during 6+ hour continuous stress testing.

Salary Prediction Dashboard

github.com/RohitBadiger/salary-predict

Python, scikit-learn, Streamlit, Pandas

- Trained a regression model on a 15,000+ row dataset, achieving an **R^2 score of 0.92** — outperforming the baseline linear regression model by **18%**.
- Deployed an end-to-end interactive Streamlit dashboard enabling non-technical users to generate salary predictions in under 3 seconds with zero backend setup required.

Education

B.E. Computer Science

Guru Nanak Dev Engineering College

2022 – 2026

CGPA: 8.6 / 10

Certifications

- **AWS Cloud Practitioner** Virtual Experience — Forage / AWS
- **JPMorgan Software Engineering** Virtual Experience — Forage
- **IBM AI Fundamentals** — IBM SkillsBuild
- **Java** (5-star Gold Badge) — HackerRank
